Using Data to Make Decisions? If not, *START!*

You must first understand your current performance in order to identify areas in need of improvement. Using data is critical to effective decision-making.

DATA = Uninterpreted observations, facts, or materials collected as a result of surveys, assessments or documentation activities.

INFORMATION = Data transformed through analysis and interpretation into a form that is useful for decision-making.

To learn more about the importance of data usage in decision-making, data analysis, data visualization, and how data is critical in selecting improvement opportunities, check out this module on MyODP:

ODP's QM Certification

An important tool used to build and sustain a culture of quality.

Successful QM is always a team effort and is everyone's responsibility!

Visit [MyODP](#) to learn how you can become QM certified and connect your team with a culture of quality!

CPS Provider QM Plan Requirements

Community Participation Support (CPS) providers with service locations where more than 10% of individuals receiving services are spending less than 25% of their time in community settings are now required to develop a QM Plan and accompanying action plan (55 PA Code § 6100.45). A template to assist with collecting and analyzing this data is [now available on MyODP!](#)
